American Bottoms Regional Wastewater

Treatment Facility

Attention: Robert D. Roddy, Plant Manager

1 American Bottoms Road

Sauget, Illinois 62201

Dear Mr. Roddy:

This is in regards to your letter dated May 8, 1990, received at the Agency May 9, 1990.

As was discussed during the May 2, 1990 conversation regarding lagoon solids, it is the Agency's understanding these wastes are characteristically identical. Based on this understanding, a separate permit for disposal is not necessary for the lagoon solids.

In reference to the sample analysis of cadmium, the concern is whether or not the waste going to a permitted disposal facility exhibits hazardous characteristics based upon E.P. Toxicity analyses. If the waste stream does not contain levels of cadmium above the permitted .95 ppm, the Agency is satisfied the waste as a whole is not characteristically hazardous and can be disposed of at a permitted facility.

If you have any additional questions regarding this situation, please feel free to contact Ken Lovett at 217/782-6762.

Sincerely,

*Edwin C. Bakowski*
